Q232. Below are two different viewpoints. Please indicate which one you agree with more.*

Smith believes we must balance public health concerns with economic concerns. A complete collapse of our economy and financial systems creates its own public health concerns.

Jones believes we must put all of our energy and resources into protecting public health. If there are consequences of that focus, we will deal with them after we have contained the coronavirus.

BASE: SPLIT SAMPLE A

Q317A. Below are two different viewpoints. Please indicate which one you agree with more.

Jones believes the right to protest is an essential one. Our healthcare system is in a better position and can handle any new cases that come from protest gatherings.

Smith believes the right to protest is important but gathering in large crowds during the coronavirus pandemic is dangerous to public health and cancels the months of social distancing we have done.*

Q555. Please tell us which opinion is closer to your own...

Some people say the U.S. **should** work closely with China on finding treatments, tests and vaccines for COVID-19 because we all need to work together to find solutions as soon as possible and China has a lot to share on how best to fight the virus.

Other people say the U.S. **should not** work closely with China on finding treatments, tests and vaccines for COVID-19 because we cannot trust China to share important information with us and they will try to steal important findings.*

Q1215. Below you will see two different points of view. Please indicate which one you agree with more.*

Smith believes that we must continue to make progress on policy issues not related to coronavirus such as education reform, economic policy and labor regulations.

Jones believes policy progress unrelated to the current coronavirus situation (issues such as education reform, economic policy, labor reform) must wait until the virus crisis is over.

Q1220. Below you will see two different points of view. Please indicate which one you agree with more.*

Wilson believes the coronavirus has shown that private industry cannot be counted on and that we should seriously look at nationalizing industries, another way of saying they should be run by the government.

Davis believes the best way to keep prices low and service and quality high is to have private markets where business has to compete for customers or face going out of business.

Q1245. Below are two approaches to ending economic shutdowns. Please read them carefully and indicate which one is closest to your own view.*

Smith says we can avoid complete shutdowns by following the examples of South Korea and other Asian countries that have tested widely, strictly quarantined mild and suspected cases, and isolated the sick. They have also imposed strict border measures, used data from surveillance cameras, cellphones, and credit card transactions to map cases, and shared information publicly about newly confirmed cases.

Jones says that we can avoid complete shutdowns if we base our decisions upon local conditions and reliable information so that people can voluntarily participate in protecting themselves and others from the coronavirus. They would encourage strict measures to isolate and protect the most vulnerable while continuing substantial social distancing and other measures to minimize the spread.

Q1250. Below you will see two different points of view. Please indicate which one you agree with more.*

Brown believes the federal government should provide relief or bailouts to states that will have trouble balancing their budgets this year for any reason. States must get the help they need to stay fiscally solvent.

Williams believes the federal government should not provide relief or bailouts to states that will have trouble balancing their budgets this year because of pre-coronavirus issues like refusing to adopt or follow a balanced budget, government employee pension costs, etc. States should not be able to use this crisis as a solution to problems they created themselves.
